Internship Opportunity at Edfora Infotech Pvt. Ltd

Do you want to change the world? Do you wish to make the world a better place for yourself and others around you?

If yes, then come along and join us in our mission to use technology to create a new way of learning and change the way education system works.

We, **Edfora**, are a young start-up with many big dreams and we need you to realize some of them. We launched our first flagship product last year and it has been huge success, and we have lots and lots of products in pipeline.

If you wish to learn how to build a product from scratch, how to think like a consumer or how to sell to market – Edfora is the place to be. We love people who wish to pursue entrepreneurship and our culture drives investing in people.

We're looking for **Smart Hustlers** who take **initiative**. If you are one, come and join us. You'll never be bored at work with us, pinky promise. With us, you will be working with the people who create the vision and direction of the company and produce the end design of the product. At **Edora** you will be surrounded by exceptional talents from IITs and other prestigious colleges who are hell bent on disrupting the traditional way of education in India.

- ✓ Durations – 3 months
- ✓ Location – South Delhi
- ✓ Experience – Anyone (Yes, even freshers) having entrepreneurial tendencies!
- ✓ Stipend – 20K-25K (Yes, unlike other start-ups, we're profitable!) After successful completion of probation tenure, the candidate may be extended with a full-time opportunity with us.

We have a role for an Intern in the Product Team of myPAT where you can learn:

- Ability to research, gather, analyse and bring meaningful insights on various business and technology areas based on customer needs.
- Preparation of business & technical presentations for the customer and internal stakeholders in collaboration with various teams - Marketing, Delivery, Technology.
- Ability to connect technology to business and functional use cases/requirements.
- Document and maintain Use Cases, Functional Design, and System Specifications.
- Follow the agile development process to release products at a lightning speed and maintain all relevant requirements artefacts.
- Coordinate with tech development, QC and UAT teams of the various project.
